Preface

Recent years have witnessed a marked increase in citizen awareness of the crime problem. This growing interest—particularly that shown by persons who previously have taken the position that crime is solely the responsibility of the law enforcement profession—is most encouraging. It offers promise of materially aiding police efforts in the control of crime.

Individuals and organizations representing many segments of our society are displaying a keen interest in programs to assist law enforcement and, ultimately, to reduce the volume of crime. In many parts of the country, studies have been instituted and plans developed not only to achieve a better understanding of local crime conditions, but also to find solutions to the complex problems involved. The success of these programs depends largely upon the availability of factual and complete statistical data—data which help individual communities to comprehend the nature and extent of crime locally and to formulate effective measures of prevention and control.

Under the stewardship of the FBI, the Uniform Crime Reporting Program has, for many years, been a primary source of information on the nature, extent, trend and distribution of crime. Recently, there has been a sharp increase in the utilization of these data and other police statistics by the courts, legislators, penal authorities and others concerned with the administration of criminal justice.

Crime statistics are an essential tool of police management. Growing recognition of this fact is resulting in an improved collection of information—and in a continuing determination by the FBI and the individual contributors to this voluntary national Program that the most reliable and meaningful statistics possible be provided in meeting the needs of the wide variety of users.

Advances in computer and related communications technology now make it both practical and feasible to obtain crime statistics more rapidly and in greater detail than heretofore possible. In cooperation with state and local police agencies, the FBI is currently developing a National Crime Information Center—a computerized law enforcement information network which will begin operation early next year.

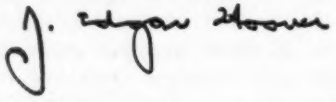
At the outset, emphasis will be placed on information regarding wanted persons, stolen property and other operational-type data which will assist the police officer on the street. The information

processed through the National Crime Information Center will, however, offer a rich potential for statistical data concerning criminals and their crimes. This potential will be fully explored and exploited as the computerized network develops.

Ultimately, Uniform Crime Reports and related records will be processed directly into this nationwide network, from a centralized state source, making possible up-to-the-minute knowledge concerning many areas of the crime problem. The availability of such timely, in-depth statistics will open a new pathway to better service and understanding among those engaged in the enforcement of the law and the administration of justice.

The new computer system promises an expanded use of statistics concerning crime. Accompanying this expanded usage is a greater responsibility—particularly for accuracy, reliability and conformity with established standards.

Technology has given us the tools to better utilize the information we possess. We must cultivate this ability to the fullest.



JOHN EDGAR HOOVER, *Director*.

Crime Factors

Uniform Crime Reports give a nationwide view of crime based on police statistics made possible by the voluntary cooperation of local law enforcement agencies. Since the factors which cause crime are many and vary from place to place, readers are cautioned against drawing conclusions from direct comparisons of crime figures between individual communities without first considering the factors involved. The national material summarized in this publication should be used, however, as a starting point to determine deviations of individual cities from the national averages.

Crime is a social problem and the concern of the entire community. The law enforcement effort is limited to factors within its control. Some of the conditions which will affect the amount and type of crime that occurs from place to place are briefly outlined below:

Density and size of the community population and the metropolitan area of which it is a part.

Composition of the population with reference particularly to age, sex and race.

Economic status and mores of the population.

Relative stability of population, including commuters, seasonal, and other transient types.

Climate, including seasonal weather conditions.

Educational, recreational, and religious characteristics.

Effective strength of the police force.

Standards governing appointments to the police force.

Policies of the prosecuting officials and the courts.

Attitude of the public toward law enforcement problems.

The administrative and investigative efficiency of the local law enforcement agency.

Summary

(This section is for the reader interested in the general crime picture. Technical data, of interest primarily to police, social scientists, and other students, are presented in the following sections. If you wish assistance in the interpretation of any information in this publication, please communicate with the Director, Federal Bureau of Investigation, U.S. Department of Justice, Washington, D.C., 20535)

Crime Capsule

More than 2,780,000 serious crimes reported during 1965; a 6 percent increase over 1964.

* * *

Fourteen victims of serious crimes per 1,000 inhabitants in 1965, an increase of 5 percent over 1964 and 35 percent over 1960.

* * *

More than 5,600 murders, 34,700 aggravated assaults with a gun and over 68,400 armed robberies in 1965.

* * *

118,900 robberies, 1,173,000 burglaries, 2,500,000 larcenies, and 486,600 auto thefts resulted in total property stolen in excess of $1 billion.

* * *

Arrests of persons under 18 for serious crimes increased 47 percent in 1965 over 1960. Increase in young age group population for same. period was 17 percent.

* * *

In 1965, 53 police officers were murdered in the line of duty. Fifty-two were killed by firearms. Since 1960, 96 percent of officers murdered with the use of firearms.

* * *

Over 30 percent of persons arrested in suburban areas were non-residents of suburban community where crime committed.

* * *

Careers in Crime: Initial FBI study of offenders disclosed over 48 percent repeated within two years after being released to the street following a prior charge.

Crime Index Totals

In the Uniform Crime Reporting Program the number of crimes in seven offense categories is tabulated on the basis of counts made by law enforcement agencies as crimes of these types become known to them. These crime categories—murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary, larceny $50 and over, and auto theft—are used to provide an index of the trend of crime in the United States. As a group, these offenses represent the most common local crime problem. Each crime classification is serious, either by virtue of the nature of the criminal act itself, such as murder, forcible rape, robbery and aggravated assault, or because of the volume of criminal incidents which require an inordinate amount of police investigative effort and time, such as burglary, larceny and auto theft.

During calendar year 1965 more than two and three-quarter million serious crimes came to police attention, a 6 percent increase in the Crime Index in 1965 over 1964. Each of the individual crime categories contributed to the overall increase. When considered as a group the crimes of violence, which comprise 13 percent of the Crime Index total, registered a 6 percent increase. Murder rose 6 percent, forcible rape 9, robbery 6, and aggravated assault 6 percent. The property crimes, which make up 87 percent of the Crime Index, rose 6 percent as a group with burglary up 6 percent, larceny $50 and over 8 percent, and auto theft 5 percent. Since 1960 the volume of crime has increased 46 percent. During this six-year period the property crimes rose 47 percent and the violent crimes 35 percent.

All city population groups had increases in 1965, led by a 7 percent rise in the group of cities having less than 50,000 inhabitants. The group with 500,000 or more population showed a 4 percent upward trend. City groups in the intermediate population range from 50,000 to 500,000 had increases from 4 to 6 percent. Suburban areas with an 8 percent rise again had a sharper percentage increase in the volume of crime than cities over 250,000 population, which were up 4 percent as a group, and rural areas which were up 3 percent.

When viewed geographically, all regions experienced crime increases in 1965 with a rise of 10 percent in the Western States, 8 percent in the Northeastern States, and 4 percent in the North Central and Southern States. All Crime Index offenses were up in all geographic regions with the exception of auto theft, which declined slightly in the Southern States.

Estimated crime figures for the United States are set forth in the

following table. The trends shown in this table are based on the actual reporting experience of comparable places.

Crime Index classification	Estimated crime 1965		Percent change over 1964	
	Number	Rate per 100,000 inhabitants	Number	Rate
Total	2,780,000	1,434.3	+6	+5
Murder	9,850	5.1	+6	+6
Forcible rape	22,470	11.6	+9	+8
Robbery	118,920	61.4	+6	+5
Aggravated assault	206,700	106.6	+6	+5
Burglary	1,173,200	605.3	+6	+4
Larceny $50 and over	762,400	393.3	+8	+7
Auto theft	486,600	251.0	+5	+4

Crime and Population

A crime rate, for practical purposes, should be considered as a victim risk rate. Crime rates do not represent the number of criminals but, more accurately, the number of victims. The crime rate relates the incidence of crime to population. According to figures released by the United States Bureau of the Census, total United States population increased 1.3 percent in 1965. In that year the national Crime Index rate was 1,434 offenses per 100,000 population, representing a 5 percent increase over 1964.

Many factors influence the nature and extent of crime in a particular community. A number of these factors are set forth on page vii of this publication. A crime rate is limited to a consideration of the numerical factor of population and does not incorporate any of the other elements which contribute to the amount of crime in an area. The statistical tables in this publication disclose that the varying crime experiences, especially among large cities and suburban communities, are affected by a complex set of involved factors and are not solely limited to numerical population differences.

The overall crime rate increase was largely influenced by the continuing upsurge in the property crimes. However, crime rates rose in each of the violent crime categories with the murder rate up 6 percent, forcible rape 8 percent, aggravated assault 5 percent and robbery 5 percent over 1964. The number of crimes per unit of population is highest in the large population centers and those areas recording the fastest growing populations.

The accompanying charts illustrate the trend in serious crime from 1960 through 1965. They reveal the percentage increase in the volume of crime, the trend in the crime rate and population growth. A further breakdown is shown in the charts for crimes of violence and

crimes against property. During the first six years of the 1960's the rate for crimes of violence as a group increased 25 percent, while crimes against property recorded a rate increase of 36 percent over the same time period.

Arrest data commencing on page 107 will enable the reader to obtain information on other types of crimes, as well as additional data relating to the seven Crime Index offenses treated thus far.

Criminal Homicide

In the Uniform Crime Reporting Program, murder and nonnegligent manslaughter include all willful killings without due process of law. There are two types of justifiable killings which are not included; namely, the killing of a felon by a police officer or by a private citizen. In 1965 there were 9,850 willful killings, a 6 percent increase over 1964. Since 1960 this serious offense has increased 9 percent. The national murder rate was 5.1 killings per 100,000 persons in 1965.

Murder follows a seasonal pattern; that is, it occurs more frequently in the summer months. The exception to this is December which again in 1965 was high for the year. Murder per unit of population was highest in the Southern States which reported a 5 percent increase in volume. Murder in the Northeastern States was also up 5 percent, North Central States up 9 percent, and the Western States 11 percent. In 1965 cities in the 100,000 to 250,000 population group reported the highest percentage increase, up 10 percent, while murder in the suburbs rose 5 percent. Willful killings in the rural area, which had decreased in 1964, rose by over 11 percent in 1965.

In 1965, 57 percent or 5,634 murders were committed with firearms. A knife or other cutting instrument was used in 23 percent of the willful killings; personal weapons, such as beatings, strangulations, etc., in 10 percent; blunt objects, 6 percent; and the remaining 4 percent were committed by other means such as by arson, poisons, explosives, etc. When viewed by geographic regions, the use of a gun in murder followed the same experience as prior years. A firearm was used in 38 percent of the willful killings in the Northeastern States, 60 percent in the Western States, 61 percent in the North Central States, and in 66 percent of the killings in the Southern States.

Circumstances or motives surrounding these willful killings indicate the extent to which this crime is generally beyond police control. Conditions that breed murder—social, human and material—vary widely from one area to another. In 1965 killings within the family made up 31 percent of all murder. Over one-half of these involved spouse killing spouse and 16 percent parents killing children. Murder outside the family unit, usually the result of altercations among acquaintances, made up 48 percent of the willful killings. In the

latter category romantic triangles or lovers' quarrels comprised 21 percent and killings resulting from drinking situations 17 percent. Felony murder, which is defined in this Program as those killings resulting from robberies, sex motives, gangland slayings and other felonious activities, made up 16 percent of these offenses. In another 5 percent of the total police were unable to identify the reasons for the killings; however, the circumstances were such as to suspect felony murder.

In those murders occurring within the family unit, a gun was used as the weapon in 59 percent of the cases, likewise, a firearm was used in 58 percent of the killings involving arguments between acquaintances. A gun was used in 49 percent of the felony murders. The victims of murder were 3 to 1 male and arrests for murder 5 to 1 male. By age group persons between 20 and 40 years of age were the most frequent victims, persons over 60 years of age made up 7 percent of the murder victims and young children under 10 years 5 percent.

In 1965 police were successful in clearing up over 90 percent of the criminal homicides. This high solution rate was fairly consistent in all population groups and geographic regions. Arrests for murder increased 7 percent in 1965 and since 1960 arrests for criminal homicide have increased 20 percent. For calendar year 1965, 48 percent of the adults charged with murder were found guilty of this offense, 20 percent were found guilty of some lesser offense and the remaining 32 percent were either acquitted or their cases were dismissed. Of all persons charged with murder, 7 percent were under 18 years of age.

Aggravated Assault

During calendar year 1965, aggravated assault increased 6 percent. Since 1960 this vicious crime has risen 40 percent in volume, with 206,700 persons attacked in the past year. For each 100,000 persons in the United States during 1965, there were 107 victims of an aggravated assault.

This crime as measured by rates was most prevalent in the Southern States, while the North Central and Northeastern States reported the lowest incidence. It occurs more frequently in the large cities; however, the sharpest upward trend in the past few years has been in the suburban areas.

Prior surveys and police experience have shown that nearly two-thirds of these offenses involve persons within the same family unit or the victim and assailant are acquainted. In this respect, as well as by the nature of the attack, aggravated assault and murder are similar. Because of the degree of the relationship between the victim and assailant, these crimes generally occur beyond the reach of police patrol. This offense is a crime of social disorder and frequently

involves hazards for police. In the last five years 58 police officers have lost their lives responding to calls for assistance involving "disturbances" or "family disputes."

Police nationally solved 73 percent of these crimes which came to their attention in 1965. Police activity, as measured by arrests for this offense, increased 5 percent during the past year. Arrests of adults rose 5 percent, while arrests for persons under 18 were up 7 percent. In reviewing arrests for this offense by sex, males outnumbered females by more than 6 to 1. The 20–24 year olds led the arrest rate age group. This is primarily an adult crime but persons under 18 were represented in 15 percent of the arrests. By areas, the distribution of arrests by age group was fairly consistent; however, in the rural areas the involvement of persons under 18 was significantly lower, namely, 7 percent.

The seasonal variation for aggravated assault remained consistent with the experience of the past several years; namely, a high number of offenses in the summer months tapering off to the lows in the colder months of the year. Similar to the 1964 experience, aggravated assault reached its peak in August, 1965, while January appeared low.

Because of the frequent close relationship between victim and offender, this offense is also a prosecutive problem. In 1965, 41 percent of the adults charged were found guilty of aggravated assault, 18 percent were found guilty of some lesser charge, and 41 percent were dismissed or defendants acquitted. Persons under 18 were charged in 15 percent of the incidents.

Approximately 17 percent of all aggravated assaults were committed with a firearm in 1965, 36 percent by knife or other cutting instrument, 22 percent with a blunt object or other dangerous weapon, and 25 percent with personal weapons, such as hands, fists, and feet. Firearms were used in 17 percent of the attacks in cities over 250,000, 20 percent of the assaults in rural areas and 16 percent in the suburbs. It is estimated there were 35,000 assaults with a gun in 1965 in which the victim survived.

The following table demonstrates the percent distribution by type of weapon used in aggravated assault by geographic region in 1965.

Region	Type of Weapon Used—Percent			
	Firearms	Knife or other cutting instrument	Blunt object or other dangerous weapon	Personal weapons
Northeastern States	10.3	39.8	23.1	26.8
North Central States	16.8	36.7	21.8	24.6
Southern States	19.8	35.8	19.1	25.3
Western States	18.3	29.7	26.3	25.7

The low conviction percentage on the original charge is due primarily to the close relationship between the assailant and victim and the latter's refusal to prosecute. Slightly over 7 of every 10 persons arrested for aggravated assault in 1965 were formally charged by police.

Forcible Rape

There were 22,470 forcible rapes or assaults to commit this offense in the United States during 1965. Many offenses of this type are not reported to a law enforcement agency primarily due to fear and/or embarrassment on the part of the victim. Volumewise, these offenses have been steadily rising for several years and were up 9 percent over 1964. Of the seven Crime Index offenses, forcible rape showed the highest percentage increase during 1965. Nationally, the forcible rape rate was 23 offenses per 100,000 female population. For the period 1960–1965, the trend of this crime against the person has increased 36 percent.

Forcible rape follows a similar seasonal pattern from year to year in that the warm or summer months, June through September generally are high. In 1965, the month of June was the high point in cities, while July was the high month in the suburban and rural areas. The chart which follows demonstrates the monthly variations in 1965, as well as the five-year average seasonal variations for this offense. Nearly two-thirds of these crimes were actual rapes by force, while the remainder were attempts to commit rape.

These offenses occur in all areas, but they are primarily big city crimes. The overall forcible rape rate increased 8 percent in 1965, with cities in excess of 250,000 recording a rate of 21 per 100,000 population.

Geographically, all regions reported increases in the volume of these offenses with the North Central States recording the sharpest upward trend of 14 percent. The Western States reported the highest forcible rape rate. Approximately 1 of every 5 forcible rapes occurred in cities in excess of 1 million, which recorded an increase of 12 percent. The volume was up 14 percent in the suburbs, 11 percent in large cities as a group, and in the rural areas there was little change.

Similar to the other crimes against the person, police efforts are limited in preventing the occurrence of forcible rape offenses since they generally occur beyond reach of patrols. Police cleared up by the arrest of the offender 64 of every 100 cases. For all offenses cleared, police identified persons under the age of 18 in 14 percent of these attacks.

Arrests for forcible rape increased 2 percent in 1965 with 64 percent of the persons arrested under the age of 25. Arrests for persons under 18 increased 13 percent and represented 21 percent of all those arrested

for this offense. Since 1960, forcible rape arrests for persons under 18 have increased 35 percent.

Not all persons arrested are bound over for prosecutive action. Many reasons exist, such as the victim refuses to prosecute, etc., which may preclude court action. In 1965, 72 percent of the persons arrested for forcible rape were tried in court. Of all persons charged with forcible rape 24 percent were referred to juvenile court jurisdiction. Of the adults charged with this offense 40 percent were found guilty of forcible rape, 17 percent of some lesser offense and 43 percent were acquitted or had their case otherwise dismissed.

Data concerning statutory rape where no force is used and other sex offenses are collected on the basis of persons arrested. Arrests for these offenses decreased 8 percent in 1965 and accounted for about 1 percent of all police arrests. Adult arrests declined 7 percent and arrests for persons under 18 were down 11 percent in the cities, 3 percent in the suburbs and up 13 percent in the rural areas. Of the total persons charged for these crimes, 55 percent were found guilty as charged, 7 percent were found guilty of a lesser charge, 17 percent were acquitted or dismissed at some prosecutive level and 21 percent of the persons charged were referred to juvenile court.

Robbery

Robbery is a violent crime, and in a great many instances, these crimes result in personal injury to the victim and are always accompanied by the use of force or the threat of force. In 1965, 58 percent of the robberies were committed by armed perpetrators. The remaining 42 percent were strong-arm type crimes such as mugging, yoking, etc., or were attempts to commit robbery.

There was a 6 percent increase in the estimated total number of these crimes when compared to 1964. There were more than 118,900 robberies in the United States during 1965, an average of about 326 crimes of robbery every day of the year. The relative increase in this type of crime was highest in the suburban area, up 13 percent. Cities over 250,000 population were up 4 percent, while rural robberies declined 4 percent. Since 1960, the number of robberies committed in the United States has risen 29 percent. Geographically, the region showing the greatest percentage change was the Northeastern States up 13 percent, followed by the Western States 10, Southern States 5, and North Central States 2 percent.

The Western States had the highest percentage of armed robbery with almost two-thirds of these offenses committed with the use of a weapon. Strong-arm robbery was highest in the North Central

Region. The following table gives the robbery breakdown for all geographic regions.

	Robbery by geographic regions				
	Total	North-eastern	North Central	Southern	Western
Armed—any weapon	57.6	60.3	52.7	56.9	63.9
Strong-arm—no weapon	42.4	39.7	47.3	43.1	36.1

When considered by type, all robbery categories had increases. In 1965, street robberies, which comprised over one-half the offenses committed in this category, rose 3 percent. Robberies of gas or service stations had a substantial increase of 8 percent, and chain store robberies rose 7 percent. Bank robberies, although making up less than 1 percent of all robbery crimes, jumped 19 percent. The average value of loot obtained by bank robbers in each attack rose from $3,309 in 1964 to $3,789 in 1965. The average loss in each robbery was $254 which amounted to a total dollar loss of more than $30 million.

The 1965 rate was 5 percent higher than in 1964 with 61 victims per 100,000 population. The group of cities with populations of more than 250,000 had a 1965 rate of 179 offenses per 100,000 inhabitants. This was about 6 times greater than the suburban area rate and 18 times higher than the rural rate. Geographically, the robbery rate was highest in the Western States.

Nationally in 1965, police cleared 38 percent of the robbery offenses through the arrest of the offenders. Slightly more than 1 of 5 of these crimes involved persons under 18 years of age as offenders. These young persons were responsible for 32 percent of the strong-arm robberies and 12 percent of the robberies where a weapon was used.

Robbery arrests for 1965 had the greatest percentage increase among the young age group under 15. There was a 9 percent rise in arrests of these young persons, whereas arrests of persons under 18 rose 6 percent and adults less than 1 percent. Persons under 25 accounted for 69 percent of all arrests for robbery nationally and those under 18 for 30 percent. From 1960 to 1965 the arrests of persons under 18 for robbery rose 40 percent.

Of those charged with robbery, 34 percent were referred to juvenile court. Of the adults charged 52 percent were found guilty as charged, 19 percent guilty of a lesser offense and 29 percent of the cases were dismissed or the defendants were acquitted.

Burglary

Burglary is the crime with the highest volume of offenses known to police of any of the Crime Index offenses. In 1965 there were 6 percent more burglaries committed than in 1964 and since 1960 this crime has increased by 41 percent. There were over 1,173,200 burglaries committed during 1965 which averaged more than 3,200 per day. In the Uniform Crime Reporting Program, burglary includes both forcible entry and unlawful entry where no force is used but trespass exists.

Burglary is primarily a crime of stealth and over 70 percent of these crimes were committed at night. Places of business were victimized in more than 50 percent of the burglaries but only 9 percent of these nonresidential burglaries occurred during daylight hours. Residential burglaries were about evenly divided between night and day, with 49 percent occurring during the daytime and 51 percent at night. There were sharp increases, however, in both day and night residence burglaries amounting to 12 and 7 percent respectively.

In 1965, 76 percent of all offenses of burglary involved the use of force to gain entry. Seventeen percent were the unlawful entry-type where no force was used and 7 percent were attempts to commit forcible entry.

In 1965 the average value of property stolen in each burglary was $242, or a national total dollar loss of $284 million. This loss does not include the damage and destruction of property which results from breaking and entering offenses.

The burglary rate, the number of offenses per 100,000 population, registered a 4 percent rise in 1965 over 1964. The trend in this offense was consistent in all areas. Geographically the Western States reported an 11 percent increase, Northeastern 7, North Central 5 and the Southern States 1 percent.

The police were able to clear 25 percent of the burglary offenses by identification and arrest of the offender. This clearance percentage applies with only slight variations to all population groups and geographic divisions. Persons under 18 years of age were found to be responsible in 37 percent of the burglary offenses which were solved. The clearance percentage for persons in the young age group ranged from a low of 20 percent in the largest cities with over one million population to a high of 51 percent in cities under 10,000 population.

Nationally there was a 4 percent increase in arrests for burglary. More than half the persons arrested were under 18 years of age and 8 of every 10 persons arrested for burglary were under 25 years of age. The highest percentage of involvement of the young age group in burglary arrests occurred in the suburban area where 56 percent of

those arrested were under 18. From 1960 to 1965 arrests of persons under 18 years of age for burglary increased 26 percent.

With respect to persons charged with burglary, over half were referred to juvenile court. For adults charged with burglary 51 percent were found guilty as charged, 15 percent were found guilty of a lesser offense and 34 percent were acquitted or had their cases dismissed.

Larceny

Larceny-theft includes crimes such as shoplifting, pocket-picking, purse-snatching, thefts from autos, thefts of auto parts and accessories, etc. It does not include fraudulent transactions, fraudulent checks or embezzlement. The Crime Index offense of larceny is limited to those thefts where the value of the goods stolen is $50

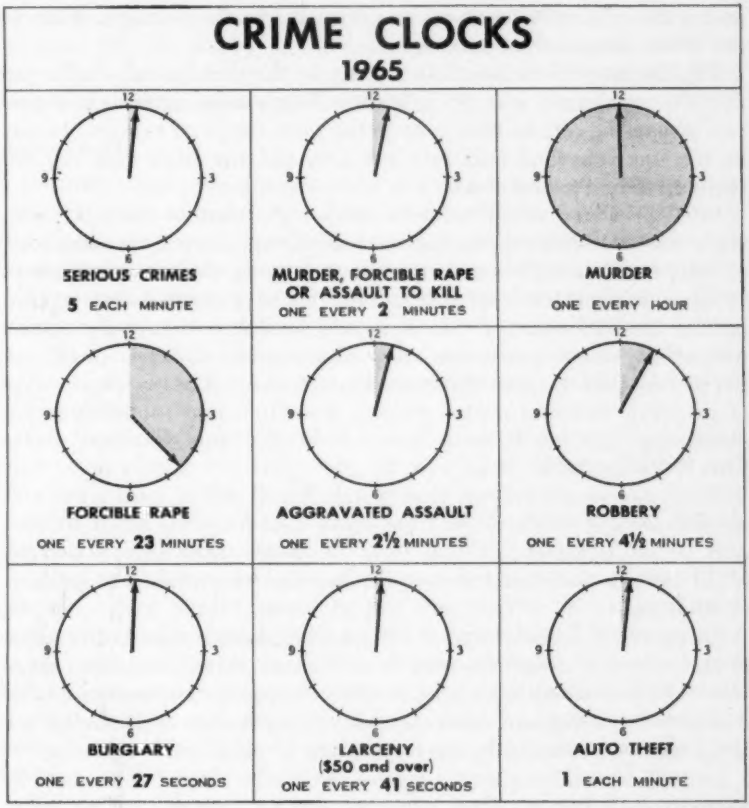

Chart 5

or more. In 1965, this Index crime increased 8 percent over 1964 and was second only to burglary in volume with 762,400 offenses reported. Since 1960, there has been an increase in larceny $50 and over of 57 percent.

The upward trend of larceny in 1965 was most pronounced in the suburban areas which showed an 11 percent rise. All cities when grouped were up 6 percent and the rural areas recorded an 8 percent upswing. Cities over 250,000 population reported an average increase of 3 percent. Geographically, the trend in thefts over $50 ranged from a rise of 11 percent in the Western States, and 10 percent in the Southern States to 8 percent in the Northeastern States and 3 percent in the North Central States.

Seasonally, these crimes conform to a general pattern which is relatively stable throughout the year but has a tendency to peak in August. In 1965 there was an unusually sharp upswing in December when compared to prior years.

The larceny or victim rate, which is the number of thefts per 100,000 population, was 393 in 1965. This was an increase of 7 percent above the rate in 1964. As in the past, the rural rate was lowest at 176, the suburban area rate was 359, and the cities over 250,000 population had a rate of 633.

In 1965 the average value of property stolen in each larceny-theft was $84 which made the total loss from these crimes in excess of $211 million. This includes the numerous thefts under $50 in value which totaled 1,752,600 in 1965. The average dollar loss for larceny in 1960 was $74. It is a recognized fact that many thefts, particularly those where the value of the goods stolen is small, are never reported to law enforcement agencies. The average value of property stolen in pocket-picking was $100, purse-snatching $45, shoplifting $27, theft from autos $110 and miscellaneous thefts from buildings $159.

When reviewed by type, it is found that thefts of auto parts and accessories and other thefts from autos accounted for about 40 percent of all larcenies. Thefts from buildings made up 18 percent of all larceny violations and stolen bicycles contributed 15 percent of the total.

Larceny is a crime of opportunity and in most instances the value of the property stolen is a matter of chance. Many of these crimes would be prevented if citizens would use appropriate precautionary measures to safeguard their property. With the opportunity for theft removed, frequently the temptation to steal is also removed.

In 1965 law enforcement agencies nationally cleared by arrest 20 percent of all larceny cases brought to their attention. The clearance rates were consistent, ranging from 18 percent in the suburban area to 22 percent in cities under 10,000 population and in the rural

area. City crime figures disclose that 44 percent of all larceny clearances involved persons under 18 years of age. This is a slight increase in the involvement of this young age group when compared to 1964. In the suburbs 46 percent of the larceny offenses were cleared by the arrest of juveniles while the percentage in the rural area was 30 percent.

Nationally, police made an average of 286 arrests for larceny for every 100,000 population in 1965. Total arrests for this crime were down less than 1 percent with decreases recorded in the adult arrests as well as arrests of persons under 18. Persons under 25 accounted for 76 percent of all arrests for theft. Persons under 21 were involved in 67 percent, those under 18 in 55 percent. Since 1960 police arrests of persons under 18 years of age for larceny have increased 60 percent.

Police charged 82 percent of the persons they arrested for larceny. Of those charged, 45 percent were referred to juvenile court jurisdiction. Of the adults charged 70 percent were found guilty of larceny, 6 percent guilty of some lesser offense, and 24 percent were acquitted or their cases were dismissed.

Auto Theft

In 1965 there were 486,600 auto thefts, a 5 percent increase over 1964. On the average, over 1,300 motor vehicles were stolen each day during the year. Since 1960, auto theft has increased 51 percent—more than double the percentage increase in automobile registrations.

Auto theft makes up 18 percent of the Crime Index offenses. The value of these stolen motor vehicles exceeded one half billion dollars in 1965. Although 88 percent of the stolen automobiles were recovered, the remaining 12 percent constituted a total dollar loss in excess of $60 million.

Geographically, the Northeastern States recorded the highest increase in volume for auto theft, followed by the North Central and Western States. The Southern States recorded no change in the volume of car theft. Nationally, auto theft reached its peak during the month of October, 1965.

About one of every four auto thefts was cleared by the arrest of the offender. The burden placed on law enforcement in this important category is readily recognizable by the involvement of young persons in the transportation-type thefts. Citizen alertness in keeping cars locked and in not leaving keys in ignitions or ignitions unlocked would aid materially in reducing these thefts since so many occur due to the accessibility of the vehicle and the easy opportunity presented for theft.

Across the Nation, arrests for auto theft decreased 3 percent. Arrests of persons under 18 decreased 5 percent, while adult arrests increased a slight 1 percent. Since 1960, however, arrests for auto

theft for persons under 18 years of age increased 44 percent and adults 37 percent.

Offenders under the age of 18 accounted for 62 percent of the arrests, while persons under 25 were responsible for 88 percent of the total arrests for auto theft. The 15–19 year old group recorded the highest arrest rate for auto theft. Males made up 96 percent of the arrests for this offense.

Of all persons charged with auto theft, 61 percent are referred to juvenile court. With respect to the adult offenders 54 percent were found guilty of auto theft, 16 percent guilty of some lesser offense and 30 percent had their cases dismissed or were acquitted.

Nearly two-thirds of all auto thefts occur at night and over one-half are from private residences, apartments or streets in residential areas. While recoveries of stolen automobiles run high, police are not able in most instances to determine the purpose of the theft unless an arrest is made. Prior surveys have disclosed, however, that about 75 percent of the cars stolen were used for transportation or the purpose of the theft was not known. Eight percent were taken for the purpose of stripping for parts, 5 percent were used in another crime or for escape and the remainder for resale purposes. Law enforcement agencies are faced with a constantly rising number of cars being stolen for stripping for parts. Regardless of the purpose of the theft, an extensive amount of police time and effort are required to handle and process these thefts. The mounting number of auto thefts with the average value of the stolen car being $1,030, plus the added costs due to increased insurance rates, damages to the stolen vehicles and the inconvenience and economic loss for the owner combine to make auto theft a very expensive crime problem.

Clearances

In 1965 the clearance or police solution rate nationally was 24.6 percent, virtually unchanged from 1964. Reports from law enforcement agencies for 1965 disclosed police cleared by arrest of the offender or by exceptional means 91 percent of the murder, 64 percent of the reported forcible rape, 73 percent of the aggravated assault and 38 percent of the robbery. Property crime clearances were, of course, lower with clearances shown in 25 percent of the burglary, 20 percent of the larceny-theft and 25 percent of the auto theft. The property crimes universally showed a lower clearance rate due to the volume of these offenses and the absence of witnesses to most of these crimes. When clearances for negligent manslaughter and larceny under $50 in value are deleted from the computations, the police clearance rate for the serious, or Crime Index offenses, becomes 26.3 percent. Geographically, police experience in clearing crimes by arrest varied only

slightly. The highest overall clearance rates were reported by the South Atlantic and West South Central States, each with 27.6 percent. Since 1961 police clearances have decreased 8 percent with all Crime Index classifications disclosing a downward trend.

Statistical data was collected in 1964 for the first time which permitted the publication of figures indicating the extent of the implication of persons under 18 in the Crime Index offenses as measured by the number of crimes cleared by arrests of persons in this young age group. The statistics reported by police in 1965 confirm the experience of the preceding year. Persons under 18 years of age were identified as having been involved in 30 percent of the serious or Crime Index offenses which were cleared by arrest. By including clearances for larceny under $50 and negligent manslaughter, the juvenile percentage jumps to 37 percent. The young age group 10 to 17 years now make up approximately 15 percent of the total United States population and based on police solutions of crimes, they commit 42 percent of all property offenses. Both arrests and clearances are useful as indices to measure involvement of youth in crimes committed in a certain area or community. Arrests show the number of persons involved while clearances measure the extent to which young people can be identified with criminal acts. Clearances are one measure of police activity to control crime; arrests for criminal acts are another. Further information relating to arrest data will be found in subsequent pages of this publication.

In considering crime clearances it is pointed out again that the arrest of one person can clear several crimes or, on the other hand several persons may be arrested in the process of clearing one crime. Police count a clearance when they have identified the offender, have sufficient evidence to charge him and actually take him into custody. Instances of exceptional clearances are counted when some element beyond police control prevents them from formally charging an offender, such as victim's refusal to prosecute or prosecution declined in lieu of prosecution elsewhere.

Persons Arrested

In the period 1960–1965 police arrests for all criminal acts, except traffic offenses, have risen 10 percent. During this same period police arrests of persons under 18 years of age jumped 54 percent. For the same period of time the increase in the 10–17 age group population was 17 percent. Thus, it can be clearly observed the percentage increase in the involvement of these young persons, as measured by police arrests, is more than triple their percentage increase in the national population. Keep in mind, however, that a relatively small percentage of the total young age population becomes involved in criminal acts, less than 5 out of 100.

When only the serious crimes are used for trend purposes during this six-year period, it is noted that arrests increased 33 percent. Arrests of the under 18 age group for the same crimes rose 47 percent. Although adult arrests were up sharply during this period, the upward trend for the young age group was double that for adults. The young age arrests for violent crimes were up 50 percent and for the property crimes 47 percent.

Adult arrests for the violent crimes for the same period were up 17 percent and for property crimes 25 percent. Arrests are first a measure of police activity as it relates to crime. Arrests do, however, provide a useful index to measure involvement in criminal acts by the age, sex and race of the perpetrators particularly for those crimes which have a high solution rate. Procedures used in this Program require that an arrest be counted on each separate occasion when a person is taken into custody, notified, or cited. Arrests do not measure the specific number of individuals taken into custody since one person may be arrested several times during the year for the same or different offenses. This happens frequently for certain types of offenses against public order such as drunkenness, vagrancy, disorderly conduct and related violations.

In 1965, arrests for all criminal acts, excluding traffic, increased less than 1 percent over 1964. Nationally, there were 37 arrests for each 1,000 persons in the United States. The arrest rate for cities as a group was 43 per 1,000 population, for suburban areas 22, and for the rural areas 16. The total volume of city arrests increased almost 1 percent, suburban 5 percent, and rural 2 percent.

Nationally, persons under 15 years of age made up 9 percent of the total police arrests; under 18, 21 percent; and under 21, 32 percent. In the suburban areas the involvement of the young age group in police arrests is considerably higher than the national figure with the under 15 age group represented in 12 percent; under 18, 32 percent; and under 21, 45 percent. In the rural area the distributions were lower for the younger age group with the under 15 age group being involved in 4 percent of the total police arrests; under 18 in 19 percent; and those under 21 in 35 percent.

In reviewing arrest figures it is important to keep in mind that police arrest practices and emphases vary which will account for some variations in these statistics from year to year. It is noted that arrests of persons under 18 rose 35 percent for prostitution and commercialized vice, and 38 percent for Narcotic Drug Law violations. In fact, nationally, approximately 1 of every 4 individuals arrested for violations of the Narcotic Drug Laws was a person under 21 years of age.

Arrests for Narcotic Drug Law violations were up 12 percent nationally. From 1960 to 1965 arrests for this violation increased 46

percent. There is set forth below a tabulation by geographic region showing the type of narcotic drug involved in the arrest of the offender.

	Geographic regions			
	Northeastern	North Central	Southern	Western
Narcotic drug laws (percent):				
Opium or cocaine and their derivatives	54.1	35.1	26.8	24.0
Marijuana	22.5	28.4	19.0	47.2
Synthetic narcotics	2.5	6.0	7.6	6.8
Other—dangerous nonnarcotic drugs	20.9	30.4	46.6	22.0

Male arrests for all crimes outnumbered female arrests 7 to 1; however, female arrests continued to increase more rapidly in 1965. There was little change in total male arrests, up 1 percent, and female arrests increased 2 percent. This was primarily influenced by a 9 percent increase in arrests of young females under the age of 18. Females were arrested in 12 percent of the serious or Crime Index-type offenses. Their involvement in these crimes is primarily for larceny. Females accounted for 18 percent of the forgery, 20 percent of the fraud and 17 percent of the embezzlement arrests.

Persons Charged

In 1965 in the serious crime categories there was a significant 5 percent decrease from 1964 in the number of adults found guilty and a sharp 13 percent increase in the number of acquittals and dismissals. Each of these serious crimes contributed to the increase in the percentage of those acquitted or dismissed. Three out of every 10 murder defendants were either acquitted or their cases were dismissed at some prosecutive stage, about one-third of those charged with forcible rape were acquitted or had their cases dismissed and over one-third of the persons charged with aggravated assault won freedom through acquittal or dismissal. Acquittals and dismissals ran high in the Narcotic Drug Law violations which were up from 36 percent in 1964 to 38 percent in 1965. A significant fact emerges—since 1962 acquittals and dismissals for the serious crimes, as a group, have risen 14 percent.

Not all persons arrested are turned over to the courts for prosecution. Some of the reasons for this are: failure of the victims to cooperate or testify in the prosecution, persons arrested are released with warnings, police determine the arrested person did not commit the offense and sufficient evidence is not obtainable to support either a formal charge or a subsequent prosecution. It is noted, for example, that nationally law enforcement agencies handle about 50 percent of the juveniles they arrest within their own agencies and release these young

persons without preferring a formal charge or referring them to juvenile authorities. In this Program, all law enforcement agencies are urged to obtain and report final dispositions in cases involving persons they arrest. Tables containing this data commence on page 103. Included in these tables are juveniles (local age limit) who were arrested and turned over to juvenile authorities in connection with specific criminal acts. In using these figures keep in mind that police methods of handling juvenile offenders differ widely.

In 1965 in the serious or Index crime categories 8 out of every 10 persons arrested were formally charged by police. Of the adults who were charged for these Index offenses, 58 percent were found guilty as charged, 12 percent guilty of a lesser crime, and 30 percent were acquitted or their cases were dismissed. The highest percentage of persons found guilty on the original charge was in the larceny category where 70 percent of the defendants were convicted for larceny. This was followed by 54 percent conviction on the original charge for auto theft, 51 percent for robbery and burglary, 48 percent for murder, 41 percent for aggravated assault and 40 percent for forcible rape. The offense showing the highest percentage conviction on a lesser charge was murder where one of every 5 defendants was convicted on some charge other than criminal homicide. The offense which had the highest percentage of acquittals and dismissals was forcible rape with 43 percent. Persons charged with larceny had their cases dismissed or were acquitted least often—24 percent of the time. In 45 percent of the cases where formal charges were preferred the offense was referred to juvenile court jurisdiction. Juvenile referrals were highest for auto theft with 61 percent. Young persons were referred to juvenile court jurisdiction after being charged in 52 percent of the burglary cases, 45 percent of the larceny, 34 percent of the robbery, 24 percent of the forcible rape, 15 percent of the aggravated assault and 7 percent of the criminal homicide.

When all crime categories are reviewed, it is found convictions on original charges remained high in the offenses against public order and decency—driving while intoxicated, drunkenness, disorderly conduct and vagrancy. Offenses of arson and vandalism recorded the greatest percentage of juvenile referrals.

Mobility of the Offender

As indicated in other pages of this publication, the mobility of the general population, and specifically the mobility of the criminal offender, influences crime rates from jurisdiction to jurisdiction—state, county and local. This factor of mobility has multiplied police problems in the control of crime and the performance of other

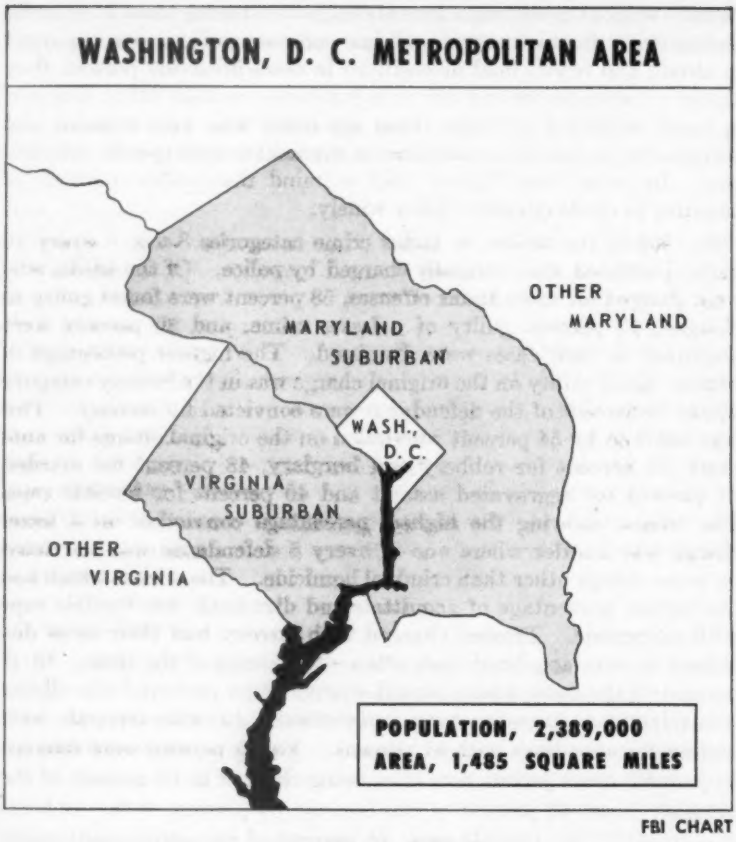

Chart 7

police services. Law enforcement agencies, particularly in suburban areas, have been experiencing sharp resident population increases without a proportional growth in police personnel. In 1965 suburban police agencies had an average of 1.2 police officers per 1,000 population, considerably below the national average. Add to this a constant flow of nonresident population from other parts of the metropolitan area, as well as the mobile criminal, and a greater strain is placed on the already inadequate police strength in suburban communities.

In an attempt to measure the mobility factor in a metropolitan area, the 17 municipal police agencies in the Washington, D.C., Standard Metropolitan Statistical Area cooperated with the FBI by furnishing information in a special survey conducted in the Fall (October–November) of 1964. Some highlights of this study are set

forth below. It is reasonable to assume that the experience of this metropolitan area would be very similar to that in other large metropolitan population centers.

For all criminal acts, excluding traffic offenses, 15.3 percent of the persons arrested in the entire Washington, D.C., metropolitan area were nonresidents of the place where arrested. When drunkenness and disorderly conduct arrests were excluded, 17.3 percent of the offenders were nonresidents. For the crimes against the person—murder, forcible rape and aggravated assault—10 percent of the persons arrested were nonresident offenders. While 9 percent of the robbery arrests were of nonresidents, 19 percent of the persons arrested for burglary, larceny and auto theft as a group were nonresidents of the community where the crimes were committed.

These mobile offenders were primarily from some part of the metropolitan area (64 percent), although they traveled to another political subdivision of the area to commit their criminal acts. Fourteen percent came from a state other than Maryland and Virginia and the District of Columbia. Twenty-two percent were from Maryland or Virginia but resided beyond the suburban fringe.

The Maryland and Virginia suburbs of this metropolitan area experienced proportionately a greater degree of criminal mobility than the large core city, Washington, D.C. In these suburbs 31 percent of all persons taken into custody were nonresidents of the community where arrested. For the crimes against the person 16 percent of the persons arrested were nonresidents. For the property crimes of burglary, larceny and auto theft 39 percent were nonresident offenders. In suburban robberies it was disclosed that over one-half were solved by the arrests of offenders who were nonresidents of the community where the crime occurred.

These mobile offenders by sex were 91 percent male and 9 percent female. The nonresident female offenders were arrested primarily on charges of larceny, assault, drunkenness and disorderly conduct. A percent distribution by age group and type of offense of these mobile offenders for the entire metropolitan Washington, D.C., area is set forth below.

Nonresident Offender—Percent Distribution by Age Group and Type of Offense

Type of offense	Under 18	Under 20	20-24	25-29	30-34	35-39	40-44	45-49	50 and over
Violent crimes (murder, forcible rape, robbery, aggravated assault)	9.1	16.7	34.1	9.8	10.6	11.4	9.1	3.8	4.5
Property crimes (burglary, larceny, auto theft)	17.7	30.7	22.9	12.7	12.0	8.0	7.0	2.5	4.2
Drunkenness and disorderly conduct	1.6	9.5	21.9	12.0	11.0	11.1	11.9	9.2	13.4
Other offenses	14.0	27.1	16.3	9.8	11.7	12.6	9.4	4.3	8.9
Total, less drunkenness and disorderly conduct	14.8	27.2	20.9	10.8	11.7	10.8	8.5	3.6	6.7

221-746°—66——3

Victim

The increasing mobility of the general population, particularly within a metropolitan area, also places greater demands on police protection needs. Crime and police employee rates in this publication are based on permanent or resident population figures since transient population counts are not available. However, the constant flow of nonresident population within and through metropolitan areas, particularly by means of the automobile, is a factor for consideration in establishing police needs in each community.

This survey in the Washington, D.C., metropolitan area revealed that 21 percent of the victims were nonresidents of the community in which the crime was committed. Specifically, in crimes against the person 15 percent of the victims were nonresidents and 22 percent of the robbery victims did not reside in the community where victimized. With respect to the crimes against property, particularly larceny and auto theft, 30 percent of the victims were nonresidents. There were proportionately more nonresident victims of property crimes in the large city, Washington, D.C., than suburbia, 35 percent versus 20 percent. Transient victims of robbery were also higher in the large city, 22 percent, compared with 14 percent in the suburbs. For the crimes against the person, nonresident victims were in the same proportion in both the large city and the suburbs.

There is set forth below a comparison based on averages relating victims and offenders by age, sex, mobility and type of crime.

Comparison of victim and offender—age, sex and mobility by type of crime

	Victim					Offender				
	Average age	Percentage				Average age	Percentage			
		Sex		Resident	Nonresident		Sex		Resident	Nonresident
		Male	Female				Male	Female		
Crimes against person (murder, forcible rape and aggravated assault)	31	57	43	85	15	31	86	14	88	12
Robbery	34	77	23	78	22	20	98	2	91	9
Crimes against property (burglary, larceny and auto theft)	38	75	25	70	30	23	94	6	85	15

A review of this table indicates victims are older than offenders except for crimes against the person, particularly murder and aggra-

vated assault. Offenders are primarily male. This is true also of victims, although in crimes against the person the percentage of males is only slightly more than half. The nonresident is victimized most frequently by robbery or other forms of theft.

The above material was gathered on the basis of police solutions of crime. It is reasonable to assume that a greater proportion of unsolved crimes are committed by mobile offenders. This is particularly true for the crimes against property. It is also the property crimes which result in fewer clearances.

Although we have highlighted here the mobility of the offender in the metropolitan area, it is clear that the vast majority of offenders and victims of crime are of local concern. The need for police to centralize criminal information is, therefore, apparent. This is especially true in view of the repeater and the extent to which he contributes to crime.

Careers in Crime

At the close of calendar year 1965 the criminal histories of 134,938 individual offenders had been entered into a study of criminal careers which was initiated by the FBI in January, 1963. This program and the publication of this material are made possible through the cooperative exchange of criminal fingerprint data among local, state and Federal law enforcement agencies which submit criminal fingerprint cards to the FBI's Identification Division on persons whom they arrest. There is a lack of uniformity in submissions made by all law enforcement agencies for all criminal charges but, generally, it is the practice to submit a criminal fingerprint card on all serious crimes, felonies, and certain misdemeanors. On the Federal level almost all arrested persons are fingerprinted by the arresting Federal agency, United States Marshals and/or the Bureau of Prisons.

Using this positive means of identification it is possible to obtain the criminal history of an offender. This history is limited, of course, to the extent that the offender is detected, arrested, a fingerprint card submitted at arrest and a disposition is furnished for the arrest. The fingerprint files of these known offenders are "flashed" in the FBI Identification Division thus providing a means of follow-up with respect to their future criminal involvement. Additional information received on these persons is added to the record which has been previously stored on magnetic tape. For the most part, these offenders are persons who have been arrested on a Federal charge in 1963, 1964 or 1965, parolees, persons on probation, serious state violators arrested

as fugitives under the Fugitive Felon Act, plus local violators who comprise about 25 percent of the total. Chronic violators of the immigration laws and those whose criminal fingerprints are submitted by the military are not included in the tabulations. The data which follows is based on an analysis of the criminal activity of offenders on whom fingerprint cards were received from January 1, 1963, to December 31, 1965.

For the 134,938 offender records which have been processed, 3 out of every 4 were repeaters; that is, they had a prior arrest on some charge. This entire sample had an average criminal career of more than 10 years (span of years from first to last arrest) during which they averaged 5 arrests, 2.4 convictions and 1.5 imprisonments. Disposition data is two-thirds complete for felonies but more incomplete for the misdemeanors or minor offenses. Leniency in the form of probation, suspended sentence, parole and conditional release had been afforded to 51 percent of the offenders. After the first leniency this group averaged more than 3 new arrests. The group granted leniency had, on the average, a criminal career extending over 12 years and they accumulated approximately seven arrests each.

The mobility of these 134,938 offenders reveals that slightly over 52 percent were arrested in one state, 25 percent in two states and 22 percent in three or more states. A distribution by sex indicates that 93 percent were males and 7 percent females. By race, 70 percent were white, 27 percent Negro and 3 percent all other.

The following table sets forth a distribution by age group in 1965, a distribution by age at first arrest and mobility by age group.

Table A.—*Distribution by Age Group*

Age group	Age, 1965		Age at first arrest	
	Number	Percent	Number	Percent

Total	52.2	25.4	22.4

This sample of almost 135,000 individual criminal records is primarily made up of Federal offenders in the sense that it was their involvement with the Federal process which brought them into the program. Keep in mind, however, that most of the Federal crimes as defined by statute are also local in nature. These violators are generally the serious offenders and, therefore, likely repeaters since it is not police practice to submit fingerprint cards on minor or petty crimes.

Profiles

Table B, Profile of Known Repeaters by Type of Crime, provides pertinent information for comparative purposes. It suggests the extent to which the repeater contributes to our crime counts year in and year out. The group of offenders making up Table B are repeaters; that is, they have been arrested at least twice and were selected by type of crime based on their last charge. The average age of these offenders ranged from 27 years for the auto thief to 45 years for the gambler. For the auto thief who repeated in that offense, the average age at first arrest for auto theft was 23 and the gambler 40 years of age. Again, the extreme ranges of average age at first arrest for any offense were the gambler 31, and the auto thief, robber, and burglar 20 years of age. Since fingerprint cards are not submitted with any degree of consistency on juvenile arrests, the average age at first arrest is influenced upward.

Criminal careers of these offenders ranged from 13 years for the gambler to 6 years for the more youthful auto thief and rapist. However, averages indicated that the burglar, auto thief and robber had the highest rate of repeating in the serious crime categories. More than half of the crimes committed by these offenders were of the Crime Index type; namely, murder, forcible rape, robbery, aggravated assault, burglary, larceny and auto theft.

Repeating in the same crime was highest for the narcotic offender 53 percent, the burglar 48 percent, the gambler 47 percent, and the bogus check offender 40 percent. Thirty-six percent of the auto thieves repeated in auto theft during the course of their criminal careers and 33 percent of the robbers repeated in robbery. For the crimes against the person—murder, rape and felonious assault—the rate of repeating in the same crime is considerably lower than for the property offenses.

The frequency of leniency action in the form of probation, suspended sentence or parole ranged from 38 percent for the murderers to 55 percent for the burglars. Like the burglar, 54 percent of the bogus check offenders also had leniency; yet, both of these criminal types have a high rate of repeating and, repeating in the same offense. The

Table B.—*Profile of Known Repeaters by Type of Crime*

Three or more States	22	24	32	34	35	29	28	17	9	36

auto thief, bogus check offender and the narcotic violator had the highest proportion of leniency for specific charges.

The forger, the auto thief, the burglar and the robber recorded the highest mobility with over 30 percent having been arrested in 3 or more states during the course of their criminal careers.

Follow-up

The first results of follow-up since this program was initiated in January, 1963, are set forth in Table C below. The 6,907 offenders in this tabulation represent criminal offenders who were released to the street between January and June, 1963. They were released either by probation, suspended sentence, parole, fine or acquittal and dismissal. By the posting of "flash" notices in the criminal identification records of these offenders, arrests for new crimes were added to each record when received through the submission of a fingerprint card. The cutoff date on follow-up was June, 1965; therefore, the experience reported below covers a two-year period. Age was computed at time of entry into the program in 1963. As a group, 48 percent of these offenders were arrested for new crimes within two years—namely between June, 1963, and June, 1965.

Table C.—*Repeaters By Age Group*

[Two-year follow-up]

Age	Total	Nonrepeaters		Repeaters	
		Number	Percent	Number	Percent
Under 20	871	365	41.9	506	58.1
20–24	1,565	664	42.4	901	57.6
25–29	1,118	511	45.7	607	54.3
30–39	1,620	869	53.6	751	46.4
40–49	1,069	678	63.4	391	36.6
50 and over	664	503	75.8	161	24.2
Total all ages	6,907	3,590	52.0	3,317	48.0

When the above records are examined by type of offense for which charged at time of release to the street, it was found that 59 percent of the burglars, 70 percent of the auto thieves and 64 percent of the robbers repeated. Of those charged with theft 45 percent repeated, as did 65 percent of the narcotic offenders and 49 percent of the forgers.

Police Employee Data

Tables are set forth commencing on page 148 of this publication which contain information on average police strength by geographic division and population group, percent civilian employees, law enforcement officers assaulted and killed in the line of duty and indi-

vidual city listings of police employees for cities with over 2,500 population which made their figures available.

The year 1965 witnessed no change in the national police employee rate for all cities when compared with 1964. The average rate of 1.9 police employees per 1,000 population (including civilian personnel) has been relatively constant since 1958 despite the rapidly rising incidence of crime and the growing frequency in the number of requests for police service. Many departments are below this average, however, when arrayed it is found that one-half of the departments have a police employee rate of 1.4 per 1,000 population or less. Due to the fact that on the average 85 to 90 percent of the total police budget is for salaries, it is incumbent on the law enforcement administrator to insure he is utilizing available manpower in the most efficient and effective way.

A table is offered this year (Table 44) which, for the first time, provides figures as to the average police employee ratio using only sworn police personnel as a base. It will be noted the national average decreases to 1.7 per 1,000 population when civilian employees are eliminated from the tabulations. There exists a healthy and growing trend among law enforcement agencies to utilize civilian employees in clerical and other nonpolice jobs which releases sworn personnel for patrol and other enforcement functions. Efforts in this direction are important at any time, but particularly now when recruiting acceptable officer candidates is difficult.

Crime in the suburbs continues to increase at a more rapid pace than in the large cities, yet the national police employee ratio for suburban areas of 1.4 is well below the average for all cities. This figure is reduced to 1.2 when civilian personnel are excluded. When arrayed by quartile, it is found that at least 50 percent of the cities in this group had police employee rates ranging from 1.0 to 1.6.

The average employee rate for sheriffs' departments is 1.0, but drops to less than one (0.8) when only sworn personnel are considered. When quartiles are used the rates range from 0.3 to 0.9 per 1,000 population for 50 percent of the departments.

It must be recognized that the law enforcement responsibilities of sheriffs' departments differ considerably in various sections of the United States. In some jurisdictions for example the sheriffs' activities are limited in large part to civil functions. The departments used in computing rates, however, are all engaged in full-scale police activity and are responsible for all phases of law enforcement in their jurisdictions. In using these rates caution must be exercised because of the variations in the nature and extent of the duties performed by the sheriff.

Any attempt to measure police activity on the basis of a broad collection of data can at best be a rough yardstick. Police workloads

do vary geographically by volume and type of activity. The tabulation below shows the number of reported Crime Index offenses, criminal arrests made, and traffic charges issued per sworn police officer by geographic region. It is based on 1965 calendar year data. This indicates a high rate of activity for the police officer in the Western States followed by the Southern and North Central States and a comparatively low activity rate in the Northeastern States.

Annual number per officer (geographic region)

Police Activity	Northeastern	North Central	Southern	Western
Crime Index offenses reported	6.5	10.0	11.3	15.8
Drunkenness and disorderly conduct arrests	3.8	8.7	21.5	14.7
Other arrests (criminal)	6.4	15.8	22.1	21.1
Traffic charges issued	130	244	344	322

The police employee strengths of State Police and State Highway Patrol organizations are set forth in Table 48. In addition, this table provides information concerning the miles of primary highway and the number of state motor vehicle registrations per sworn employee by state.

Figures with respect to average police strength, as well as rates which are set forth in Tables 43 and 44, are supplied as a guide and must not be interpreted as representing desirable or recommended police strength. A careful analysis must be made of the various factors which contribute to the need for police service in a given community before a determination can be reached with regard to adequate manpower requirements.

Police Killed

The number of law enforcement officers murdered in the line of duty in 1965 dropped slightly from 1964. There were 53 police victims in 1965 whereas there were 57 officers murdered in 1964. With the addition of these 53 deaths the total number of police killings increased to 278 for the six-year period 1960–1965. In 1965 there were 30 additional deaths of law enforcement officers as a result of accidents in the line of duty, most of which were automobile or motorcycle fatalities.

Effecting arrests and transporting prisoners continue to carry the greatest risk for police as evidenced by the fact that 30 percent of the 278 men murdered over the six-year period were engaged in handling these police functions. In fact, 42 percent of the 53 police killed in 1965 were making arrests or were transporting prisoners who had been apprehended. A further analysis of the type of activity in which the 278 officers were involved discloses 21 percent were answering disturbance-type calls, such as family quarrels, man with a gun, etc., while 20 percent were murdered when they interrupted a robbery in

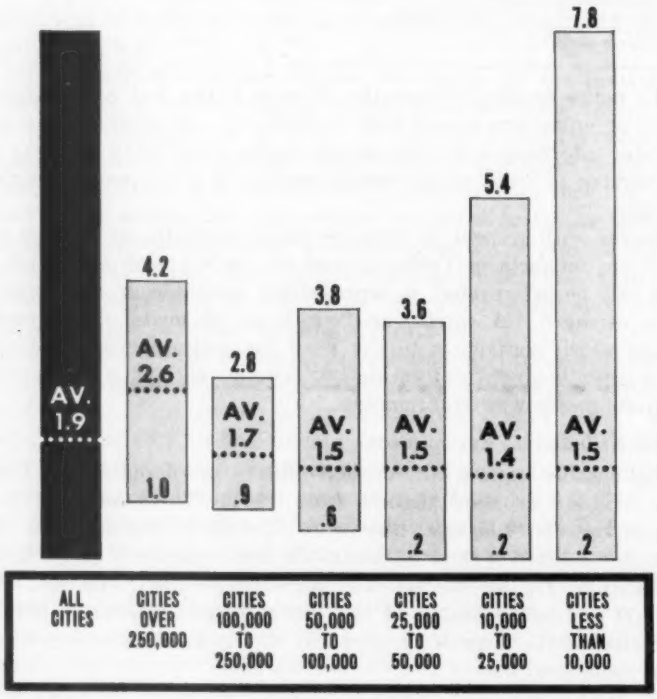
BY POPULATION GROUPS, DECEMBER 31, 1965



FBI CHART

Chart 8

progress or were pursuing robbery suspects. Interrupting burglaries in progress or pursuing burglary suspects accounted for 12 percent of the deaths, investigating suspicious persons and circumstances 11 percent and 17 men or 6 percent were murdered in unprovoked attacks by berserk or mentally deranged or disturbed individuals, a number of whom had prior histories of mental disorders. In the following table, police murders are distributed by geographic region and by type of activity in which the officers were engaged.

Police Killed by Geographic Region and Type of Activity 1960–1965

	North-east	North Central	South	West	Total	
					Number	Percent
1. Responding to "disturbance" calls (family quarrels, man with gun, etc.)	11	19	22	6	58	21
2. Burglaries in progress or pursuing burglary suspects	4	8	13	8	33	12
3. Robberies in progress or pursuing robbery suspects	15	12	13	15	55	20
4. Attempting other arrests and transporting prisoners	6	10	57	11	84	30
5. Investigating suspicious persons and circumstances	3	6	14	8	31	11
6. Berserk or deranged person (no warning-unprovoked attack)	6	2	7	2	17	6
Total	45	57	126	50	278	100

In 1965 all but one of the 53 officers died from wounds inflicted by firearms—32 were victims of handguns, 13 were killed by use of shotguns and 7 by rifles. Since 1960 firearms have been used in 96 percent of the murders of police officers in the line of duty and of those killed by firearms, 78 percent were murdered with handguns. The median period of police service for officers slain since 1960 remained at 6 years. Ten percent of the murdered officers had been employed in law enforcement one year or less, 59 percent had 5 or more years of police experience and almost one-third were veterans of 10 years or more service.

Police officers on car patrol contributed the heaviest toll to those murdered in 1965 with a total of 37 deaths. This is typical of the six-year period during which time 186 of the deceased officers were assigned to car patrols, 24 were on foot patrol, 48 were detectives or were assigned duties of a specialized nature and 20 were technically off duty. The latter became involved in the incidents which resulted in their deaths by attempting to prevent a crime occurring in their presence.

During 1965, 27 of the officers who died from criminal action were being assisted at the time of the incident by a fellow officer while 26 were alone. During the six years for which these figures have been accumulated 123 officers died while operating alone, whereas 155 were receiving assistance at the scene when they were killed.

In studying police deaths in cities where department policy is known with respect to use of one-man patrol cars, two-man patrol cars or combinations of 1 and 2-man patrol cars, it is found that 87 officers lost their lives in 69 cities over the 6-year span under consideration. Forty-five (52 percent) of these men were assigned to two-man car patrols, while 42 (48 percent) were assigned to one-man cars. In carrying this analysis a step further it is found that in 22 of the 42 incidents where the police victim was assigned to a one-man car, the lone officer was receiving assistance from fellow officers at the scene of the crime. It is thus determined that of the 87 deaths, officers were being aided at the scene in 77 percent of the cases and were alone at the scene in 23 percent of the cases. In those cities which used combinations of 1 and 2-man patrol cars there were 36 murders reported where the officers were engaged in two-man car operations and 25 where one-man cars were in use.

During 1964, the latest year for which figures are available, there was a slight 3 percent upward trend in the number of cities using only one-man cars. There was a corresponding 3 percent decrease in the number of cities using combinations of one and two-man cars. The number of cities using two-man cars exclusively remained at 5 percent of the total reporting cities, unchanged from the preceding year.

A table is presented this year which indicates the type of police duty to which murdered officers were assigned, as well as the type of police activity in which they were engaged at the time they were murdered. These figures disclose the highest incidence of police deaths resulted when the law enforcement officers who were assigned to one-man patrol cars attempted to make arrests or transport prisoners. The second most frequent set of circumstances surrounding these deaths occurred among officers assigned to two-man car patrols who were responding to disturbance calls including such things as family quarrels, man with a gun, etc. This category was followed closely by deaths of police officers assigned to two-man patrol cars who were making arrests or transporting prisoners. It should be noted in studying these figures that, as indicated above, many of the officers assigned to one-man patrol cars and foot patrol were receiving assistance on the scene from fellow officers at the time of the fatal attacks.

During the six-year period for which statistics have been maintained there have been 362 persons involved as offenders in the 278 murders. When accounting for these 362 persons, it is found that 304 were arrested, 43 were slain justifiably by police at the time of the incident or shortly thereafter, 13 committed suicide, 1 died a natural death and 1 drowned before being taken into custody.

Total	82	*83	21	24	48	20	278

*51 city police officers, 32 county and state police officers.

When an examination is made of the prior criminal histories of those involved, it is found that 76 percent had been arrested on some criminal charge prior to the time they became participants in the police murders and, of even more significance, over one-half of this group had been previously arrested for assaultive-type crimes such as rape, robbery, assault with a deadly weapon, assault with intent to kill, etc. In fact, the records disclose 9 individuals had been charged on some prior occasion with an offense of murder.

Seven of these had been paroled on the murder charge, one was an escapee having fled confinement while serving time for murder, and one was an escapee who fled while awaiting trial for murder. Sixty-eight percent of the 362 persons who were responsible are known to have had prior convictions on criminal charges and more than two-thirds of this group had received leniency in the form of probation or parole on at least one of these convictions. More than 1 of every 4 of the murderers was on parole or probation when he killed a police officer.

The murderers of police officers ranged in age from a boy of 14 to a man of 73. The median age was 27. Seventeen of the slayers were under 18 years of age at the time they committed the offense, 40 were in the 18–20 year age group and 99 were in the 21–25 year bracket. Twenty-two were over 50 years of age when they murdered a police officer and the heaviest age concentration lies in the 20 to 30 age span with the highest frequency being found at age 25.

The national rate for assaults on law enforcement officers in 1965 was 10.8 assaults for every 100 officers. While these assaults did not always result in personal injury to the officer-victim, in approximately one-third of these assaults the officer did suffer physical harm. Further details relating to assaults on police by geographic division and population group can be found in Table 47. Briefly, this table discloses the highest overall assault rate was in the East South Central States with 18.3 assaults per 100 police officers. This was followed by the South Atlantic States with a rate of 17.8, the Mountain States 12.9, and the Pacific States 10.8. The rate in each of the other geographic divisions was slightly below the national average.

Law Enforcement Code of Ethics

As a Law Enforcement Officer, *my fundamental duty is to serve mankind; to safeguard lives and property; to protect the innocent against deception, the weak against oppression or intimidation, and the peaceful against violence or disorder; and to respect the Constitutional rights of all men to liberty, equality and justice.*

I will *keep my private life unsullied as an example to all; maintain courageous calm in the face of danger, scorn, or ridicule; develop self-restraint; and be constantly mindful of the welfare of others. Honest in thought and deed in both my personal and official life, I will be exemplary in obeying the laws of the land and the regulations of my department. Whatever I see or hear of a confidential nature or that is confided to me in my official capacity will be kept ever secret unless revelation is necessary in the performance of my duty.*

I will *never act officiously or permit personal feelings, prejudices, animosities or friendships to influence my decisions. With no compromise for crime and with relentless prosecution of criminals, I will enforce the law courteously and appropriately without fear or favor, malice or ill will, never employing unnecessary force or violence and never accepting gratuities.*

I recognize *the badge of my office as a symbol of public faith, and I accept it as a public trust to be held so long as I am true to the ethics of the police service. I will constantly strive to achieve these objectives and ideals, dedicating myself before God to my chosen profession . . . law enforcement.*

International Association of Chiefs of Police, Inc.

Introduction

Background

The Uniform Crime Reporting Program is the outgrowth of a need for a national and uniform compilation of police statistics. This need was expressed by law enforcement executives many years ago. In 1930, crime reports were solicited from police departments throughout the Nation based on uniform classifications and procedures developed by the Committee on Uniform Crime Records of the International Association of Chiefs of Police (IACP). In that year the Federal Bureau of Investigation (FBI), on request of the above organization, assumed the role as the national clearinghouse.

The Committee on Uniform Crime Records, IACP, continues to serve in an advisory capacity to the FBI in the operation of this Program. The assistance of the Committee is especially valuable in actively promoting the quality of the reports supplied by the cooperating law enforcement agencies. In this connection, the Field Service Division of the IACP is also playing an active and effective part in quality control through surveys of police record and crime reporting systems. Dr. Peter P. Lejins, Professor, Department of Sociology, University of Maryland, continues as a consultant to the FBI in the conduct of this Program.

The Committee on Uniform Crime Records at its April, 1965, meeting reaffirmed the purpose and objectives of the Uniform Crime Reporting Program. Briefly, the Committee approved a more refined collection of robbery by type, a revision in the larceny classification, a special nationwide survey on sex offenses, restated its position with regard to the definition of auto theft, and the format utilized in the publication of crime statistics.

The Committee at the foregoing meeting and also during the course of the October, 1965, meeting discussed the need to further subdivide a number of the broad crime classifications utilized in the Program. A detailed breakdown of larceny by type of theft was developed and introduced as a collection item beginning in January, 1966. While this breakdown of the larceny classification provides for a better understanding of the nature of this offense, it will also serve to identify types of theft which could be utilized as a Crime Index category. The dollar valuation of larceny as presently used would be eliminated in favor of a collection of larceny by type without regard to the value of property stolen. The experience gained from

this nationwide collection of larceny by type in 1966 will greatly assist in making a determination with respect to this crime classification.

Committees on Uniform Crime Reporting within state law enforcement associations are active in providing service by promoting interest in the Uniform Crime Reporting Program, fostering more widespread and more intelligent use of uniform crime statistics and by lending assistance to contributors when the need exists.

Objectives

The fundamental objective of this Program is to produce a reliable fund of nationwide criminal statistics for administrative and operational use of law enforcement agencies and executives. At the same time, meaningful data is provided for other professionals with related interests in the crime problem and for scholars, as well as to inform the public of general crime conditions.

Specifically, the means utilized to attain these goals are: (1) an attempt is made to measure the extent, fluctuation and distribution of serious crime in the United States through the use of a Crime Index consisting of seven selected offenses. This count is based on these seven offenses being reported to the police or coming directly to their attention. (2) The total volume of all types of criminal offenses is compiled as they become known by police arrests. (3) Since the above are also measures of law enforcement activity, related data is collected to demonstrate effectiveness of enforcement activities, available police strength and significant factors involved in crime.

Reporting Procedure

Under this national voluntary system each contributing law enforcement agency is wholly responsible for compiling its own crime reports for submission to the FBI. Each contributor is supplied with the Uniform Crime Reporting Handbook which outlines in detail procedures for scoring and classifying offenses. The Handbook illustrates and discusses the monthly and annual reporting forms, as well as the numerous tally sheets made available to facilitate the periodic tabulation of the desired data.

The publication of the Uniform Crime Reporting "Newsletter," which was initiated in October, 1963, has continued with issues being published when pertinent. This "Newsletter" is utilized to explain revisions in the Program as well as to present information and instructional material to assist contributors.

Recognizing that a sound records system is necessary if crime reporting is to meet desirable standards, the FBI furnishes a Manual of Police Records to law enforcement agencies upon request. Special

Agents of the FBI are widely utilized to encourage new contributors and to assist them by explaining the procedures and definitions necessary under this uniform system.

On a monthly basis, city police, sheriffs and state police report the number of offenses that become known to them in the following crime categories: criminal homicide, forcible rape, robbery, assault, burglary, larceny, and auto theft. This count is taken from a record of all complaints of crimes received by the police from victims or other sources or discovered by the police in their own operations. Complaints determined by police investigation to be unfounded are eliminated from this count. The number of "offenses known" in these crime categories is reported to the FBI without regard to whether anyone is arrested, stolen property is recovered, local prosecutive policy, or any other consideration. Police agencies report on a monthly basis the total number of these crimes which they clear by arrest and, separately, the crimes cleared by the arrest of persons under 18 years of age. Police additionally report certain other analytical data pertaining to specific crime categories, including total arrests made for the month for all criminal acts separated as to adults and juveniles.

In annual reports, "offenses known" data and clearances by arrest are summarized by the contributors. Annual forms provide a report of persons arrested for all criminal offenses with respect to age, sex and race of the offender, as well as an accounting of the number of persons formally charged and their disposition. Police employee data are collected annually, including the number of police killed and assaulted.

Reporting Area

During the calendar year 1965, crime reports were received from law enforcement agencies representing 97 percent of the total United States population living in standard metropolitan statistical areas, 89 percent of the population in other cities, and 75 percent of the rural population. The combined coverage accounts for 92 percent of the national population.

Presentation of crime data by areas as used in this publication follows as closely as practical the definitions used by the Bureaus of the Budget and Census for standard metropolitan statistical areas and other cities. There is, however, some deviation insofar as the rural area is concerned. For crime reporting purposes rural is generally the unincorporated portion of a county outside of standard metropolitan statistical areas. In addition, sheriffs' departments or state police agencies frequently provide coverage for small incorporated communities which do not provide their own police service. These places

are characteristically more rural than urban, thus the crime counts for these places are included in the rural tabulations. In addition, statistics are presented in certain tables relative to *"suburban"* areas. A suburban area consists of cities with 50,000 or less population together with counties which lie within a standard metropolitan statistical area. In this use of suburban the core city experience is, of course, excluded. The suburban area concept is used because of the peculiar crime conditions which exist in these communities surrounding the major core cities. These metropolitan areas are not rural in nature, yet neither are they comparable to large cities although they have many of the problems identified with the latter.

Standard metropolitan statistical areas are generally made up of an entire county or counties having at least one core city of 50,000 or more inhabitants, with the whole meeting the requirements of certain metropolitan characteristics. In New England, "town" instead of "county" is used to describe standard metropolitan statistical areas. These towns do not coincide generally with established crime reporting units; therefore, metropolitan state economic areas in New England are used in this area tabulation since they encompass an entire county or counties. Standard metropolitan statistical areas make up an estimated 67 percent of the total United States population.

Other cities are urban places outside standard metropolitan statistical areas. Most of these places of 2,500 or more inhabitants are incorporated and comprise 12.6 percent of the 1964 estimated population. *Rural areas* are made up of the unincorporated portion of counties outside of urban places and standard metropolitan statistical areas and represent 20.4 percent of our national population. Throughout this Program, sheriffs, county police and many state police report on crimes committed within the limits of the county but outside cities, while police report on crimes committed within the city limits (urban places).

Verification Processes

Uniformity of crime data collected under this Program is of primary concern to the FBI as the national clearinghouse. With the receipt of reports covering approximately 8,000 jurisdictions, prepared on a voluntary basis, the problems of attaining uniformity are readily apparent. Issuance of instructions does not complete the role of the FBI. On the contrary, it is standard operating procedure to examine each incoming report not only for arithmetical accuracy but also, and possibly of even more importance, for reasonableness as a possible indication of errors.

Variations in the level and ratios among the crime classes established by previous reports of each agency are used as a measure of possible

or probable incompleteness or changes in reporting policy. Necessary arithmetical adjustments or unusual variations are brought to the attention of the submitting agency by correspondence. During 1965 17,101 letters were addressed to contributors primarily as a result of verification and evaluation processes. Correspondence with contributors is the principal tool for supervision of quality. Not only are the individual reports studied, but also periodic trends for individual reporting units are prepared, as are crime rates in descending order for all units grouped for general comparability to assist in detecting variations and fluctuations possibly due to some reason other than chance. For the most part, the problem is one of keeping the contributors informed of the type information necessary to the success of this Program.

The elimination of duplication of crime reporting by the various agencies is given constant attention. In addition to detailed instructions as to the limits of reporting jurisdictions between sheriffs and police in urban places, lists of urban places by county are furnished to sheriffs, county police, and in some instances state police organizations.

Uniform Crime Reporting has been taught to all law enforcement officers attending the FBI National Academy. The Academy was established in 1935, and there are 2,972 graduates who are still in law enforcement, over 27 percent of whom are the executive heads of law enforcement agencies. The FBI also presents this subject to regional police schools throughout the country.

Contacts by Special Agents of the FBI are utilized to enlist the cooperation of new contributors and to explain the purpose of this Program and the methods of assembling information for reporting. When correspondence, including specially designed questionnaires, fails, Special Agents may be directed to visit the contributor to affirmatively resolve the misunderstanding.

Variations from the desired reporting standards which cannot be resolved by the steps indicated above are brought to the attention of the Committee on Uniform Crime Records of the IACP. The Committee may designate a representative to make a personal visit to the local department to assist in the needed revision of records and reporting methods.

It is clear, of course, that regardless of the extent of the statistical verification processes used by the FBI, the accuracy of the data assembled under this Program depends upon the degree of sincere effort exerted by each contributor to meet the necessary standards of reporting and, for this reason, the FBI is not in a position to vouch for the validity of the reports received.

The Crime Totals

Communities not represented by crime reports are relatively few, as discussed previously and as shown by an examination of the tables which follow presenting 1965 crime totals for the Index of Crime classifications. The FBI conducts a continuing program to further reduce the unreported areas.

Within each of the three areas—standard metropolitan statistical, other urban, and rural—it is assumed that the unreported portion had the same proportionate crime experience as that for which reports were received. In lieu of figures for the entire year from those agencies, reports for as many as 9 months were accepted as sufficiently representative on which to base estimates for the year. Estimates for unreported areas are based on the reported crime experience of similar areas within each state. Certain refinements are made of this basic estimating procedure as the need arises.

Crime Trends

Crime data for trends are homogeneous to the extent that figures from identical reporting units are used for each of the periods tabulated. Exclusions are made when figures from a reporting unit are obviously inaccurate for any period or when it is ascertained that unusual fluctuations are due to such variables as improved record procedures and not to chance.

As a matter of standard procedure, crime trends for individual places are analyzed by the FBI five times a year. Any significant increase or decrease is made the subject of a special inquiry with the contributing agency. Whenever it is found that crime reporting procedures are responsible for the difference in level of crime, the figures for specific crime categories or totals are excluded from the trend tabulations. On the other hand, *crime rate tables* by state and standard metropolitan statistical area contain the most reliable reports available for the current year, and care should be exercised in any direct comparisons with prior issues. Changes in crime level may have been due in part to improved reporting or records procedures rather than to chance.

Population Data

In computing crime rates by state, geographic division, and the Nation as a whole, population estimates released by the Bureau of the Census on August 27, 1965, were used. Population estimates for individual cities and counties were prepared by using Special Census Reports, state sources and estimates, commercial sources, and extrapolation where no other estimate was available. Complete 1965 population estimates for individual cities and counties were used

from 14 states while official sources in other states provided limited data which was used selectively. The estimated United States population increase in 1965 was 1.3 percent over 1964 according to figures published by the Bureau of the Census.

Classification of Offenses

A stumbling block to a uniform national crime reporting system in the United States results from variations in definitions of criminal violations among the states. This obstacle, insofar as uniformity of definitions is concerned, was removed by the adoption of an arbitrary set of crime classifications. To some extent the title of each classification connotes in a general way its content. However, in reading the explanation of each category, it is very important to keep in mind that because of the differences among the state codes there is no possibility in a system such as this to distinguish between crimes by designations such as "felony" and "misdemeanor."

A continuing program is carried out to furnish contributors with timely supplemental instructions as the need arises in certain classifications. These are aimed at the clarification of any misunderstandings which may arise and the redirection of attention to the proper application of classification procedures under this system.

Brief definitions of crime classifications utilized in this Program are listed below:

1. **Criminal homicide.**—(*a*) Murder and nonnegligent manslaughter: all willful felonious homicides as distinguished from deaths caused by negligence. Excludes attempts to kill, assaults to kill, suicides, accidental deaths, or justifiable homicides. Justifiable homicides are limited to: (1) the killing of a person by a peace officer in line of duty; (2) the killing of a person in the act of committing a felony by a private citizen. (*b*) Manslaughter by negligence: any death which the police investigation establishes was primarily attributable to gross negligence of some individual other than the victim.

2. **Forcible rape.**—Rape by force, assault to rape and attempted rape. Excludes statutory offenses (no force used—victim under age of consent).

3. **Robbery.**—Stealing or taking anything of value from the person by force or violence or by putting in fear, such as strong-arm robbery, stickups, armed robbery, assault to rob, and attempt to rob.

4. **Aggravated assault.**—Assault with intent to kill or for the purpose of inflicting severe bodily injury by shooting, cutting, stabbing, maiming, poisoning, scalding, or by the use of acids, explosives, or other means. Excludes simple assault, assault and battery, fighting, etc.

5. **Burglary—breaking or entering.**—Burglary, housebreaking, safecracking, or any unlawful entry to commit a felony or a theft,

even though no force was used to gain entrance and attempts. Burglary followed by larceny is not counted again as larceny.

6. **Larceny—theft** (except auto theft).—(*a*) Fifty dollars and over in value; (*b*) under $50 in value. Thefts of bicycles, automobile accessories, shoplifting, pocket-picking, or any stealing of property or article of value which is not taken by force and violence or by fraud. Excludes embezzlement, "con" games, forgery, worthless checks, etc.

7. **Auto theft.**—Stealing or driving away and abandoning a motor vehicle. Excludes taking for temporary use when actually returned by the taker or unauthorized use by those having lawful access to the vehicle.

8. **Other assaults.**—Assaults and attempted assaults which are not of an aggravated nature.

9. **Arson.**—Willful or malicious burning with or without intent to defraud. Includes attempts.

10. **Forgery and counterfeiting.**—Making, altering, uttering or possessing, with intent to defraud, anything false which is made to appear true. Includes attempts.

11. **Fraud.**—Fraudulent conversion and obtaining money or property by false pretenses. Includes bad checks except forgeries and counterfeiting.

12. **Embezzlement.**—Misappropriation or misapplication of money or property entrusted to one's care, custody or control.

13. **Stolen property; buying, receiving, possessing.**—Buying, receiving, and possessing stolen property and attempts.

14. **Vandalism.**—Willful or malicious destruction, injury, disfigurement or defacement of property without consent of the owner or person having custody or control.

15. **Weapons; carrying, possessing, etc.**—All violations of regulations or statutes controlling the carrying, using, possessing, furnishing, and manufacturing of deadly weapons or silencers and attempts.

16. **Prostitution and commercialized vice.**—Sex offenses of a commercialized nature and attempts, such as prostitution, keeping bawdy house, procuring, transporting, or detaining women for immoral purposes.

17. **Sex offenses** (except forcible rape, prostitution, and commercialized vice).—Statutory rape, offenses against chastity, common decency, morals, and the like. Includes attempts.

18. **Narcotic drug laws.**—Offenses relating to narcotic drugs, such as unlawful possession, sale or use. Excludes Federal offenses.

19. **Gambling.**—Promoting, permitting, or engaging in gambling.

20. **Offenses against the family and children.**—Nonsupport, neglect, desertion, or abuse of family and children.

21. **Driving under the influence.**—Driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.

22. **Liquor laws.**—State or local liquor law violations, except "drunkenness" (class 23) and "driving under the influence" (class 21). Excludes Federal violations.

23. **Drunkenness.**—Drunkenness or intoxication.

24. **Disorderly conduct.**—Breach of the peace.

25. **Vagrancy.**—Vagabondage, begging, loitering, etc.

26. **All other offenses.**—All violations of state or local laws except classes 1–25.

27. **Suspicion.**—Arrests for no specific offense and released without formal charges being placed.

28. **Curfew and loitering laws (juveniles).**—Offenses relating to violation of local curfew or loitering ordinances where such laws exist.

29. **Runaway (juveniles).**—Limited to juveniles taken into protective custody under provisions of local statutes as runaways.

The Index of Crime, 1965

In this section, tabulations are shown to indicate the probable extent, fluctuation and distribution of crime for the United States as a whole, geographic divisions, individual states and standard metropolitan statistical areas. The measure used is a Crime Index consisting of seven important offenses which are counted as they become known to the law enforcement agencies. Crime classifications used in the Index are: murder and nonnegligent manslaughter, forcible rape, robbery, aggravated assault, burglary—breaking or entering, larceny $50 and over, and auto theft.

The total number of criminal acts that occur is unknown, but those that are reported to the police provide the first means of a count. Not all crimes come readily to the attention of the police; not all crimes are of sufficient importance to be significant in an index; and not all important crimes occur with enough regularity to be meaningful in an index. With these considerations in mind, the above crimes were selected as a group to furnish an abbreviated and convenient measure of the crime problem.

It is important to remember in reviewing the tables in this section that the volume of crime in a state or standard metropolitan statistical area is subject to the factors set forth on page vii. Estimates of current permanent population are used to construct crime rates. With our highly mobile population all communities, metropolitan areas and states are affected to a greater or lesser degree by the element of transient population. This factor is not accounted for in crime rates since no reliable estimates are available nationwide.

Table 1.—*Index of Crime, United States, 1965*

Area	Population	Total offenses	Murder and nonnegligent manslaughter	Forcible rape	Robbery	Aggravated assault	Burglary	Larceny $50 and over	Auto theft
United States Total	**193,818,000**	**2,780,015**	**9,550**	**22,467**	**118,916**	**206,661**	**1,173,201**	**782,352**	**466,568**
Rate per 100,000 inhabitants		1,434.3	5.1	11.6	61.4	106.6	605.3	393.3	251.0
Standard Metropolitan Statistical Area	**129,796,000**								
Area actually reporting [1]	97.4%	2,268,555	6,801	17,408	108,682	155,479	937,583	615,931	426,671
Estimated total	100.0%	2,312,351	6,978	17,844	110,623	158,843	956,038	627,054	434,971
Rate per 100,000 inhabitants		1,781.5	5.4	13.7	85.2	122.4	736.6	483.1	335.1
Other Cities	**24,338,000**								
Area actually reporting	88.5%	215,748	716	1,170	3,951	17,412	97,106	65,950	29,443
Estimated total	100.0%	242,345	851	1,317	4,433	20,435	109,121	73,408	32,780
Rate per 100,000 inhabitants		995.7	3.5	5.4	18.2	84.0	448.4	301.6	134.7
Rural	**39,684,000**								
Area actually reporting	75.0%	173,735	1,296	2,412	2,786	17,684	86,019	48,816	14,722
Estimated total	100.0%	225,319	2,021	3,306	3,860	27,383	108,042	61,890	18,817
Rate per 100,000 inhabitants		567.8	5.1	8.3	9.7	69.0	272.3	156.0	47.4

[1] The percentage representing area actually reporting will not coincide with the ratio between reported and estimated crime totals since these data represent the sum of the calculations for individual states which have varying populations, portions reporting and crime rates.

Population by area for each state is 1965 estimate; total population for each state is Bureau of the Census provisional estimate as of July 1, 1965, and subject to change. All rates were calculated on the estimated population before rounding.

[1] For standard metropolitan statistical areas in this table the percentage actually may not coincide with the ratio between reported and estimated crime totals since these data represent the sum of such calculations for individual areas varying in size, portions reporting, and crime rates.

[2] Population by area for each state is 1965 estimate; total population for each state is Bureau of the Census provisional estimate as of July 1, 1965, and subject to change. All rates were calculated on the estimated population before rounding.

General United States Crime Statistics

The data presented in this section are primarily of value to law enforcement executives, news media and others for the purpose of comparing the crime experience of a community with the averages reported nationally by communities of similar size. Crime trends and rates are tabulated by grouping places according to population size. Police performance in clearing crimes by arrest is presented by population group and geographic division.

National city averages are also shown indicating the type and value of the property stolen, by offense and type, and value recovered by police investigation. Robbery, burglary, and larceny-theft are examined by type, as well as where and when they occurred.

City, suburban, and rural area arrest rates are shown for all criminal offenses. Arrest rates by population group are also listed for specific offenses. This is another step in building totals for crime categories other than those in the Crime Index and in presenting crimes known to the police through arrests.

Statistical data relating to suburban areas are provided for the use of law enforcement officials in suburban communities in making limited comparisons. Places used to establish totals for suburban areas include cities with 50,000 or less population and county law enforcement agencies in standard metropolitan statistical areas. Of course, the crime experience of the large core city is excluded.

It is important to remember in studying averages that usually about half the units used must be above and about half below. National averages can provide the police administrator with valuable guidance in analyzing the local crime count, as well as the performance of his force in combating crime. The analysis, however, does not end with such a comparison, for it is only through an appraisal of local conditions that a clear picture of the community crime problem or the effectiveness of the police force is possible.

Table 5.—*Crime Trends, Offenses Known to the Police, 1964–65, by Population Groups*

[1965 estimated population]

Population group	Grand total	Crime index total	Criminal homicide		Forcible rape	Robbery	Aggravated assault	Burglary—breaking or entering	Larceny—theft		Auto theft
			Murder and nonnegligent manslaughter	Manslaughter by negligence					$50 and over	Under $50	
TOTAL, ALL AGENCIES: 5,388 agencies; total population 159,771,000:											
1964	3,937,663	2,396,875	7,457	6,090	17,580	103,984	162,527	987,594	624,783	1,604,698	423,950

Arrest Data

Tables in the following section provide certain personal characteristics of individuals arrested for all criminal acts. Arrest rates and trends are shown for city, suburban and rural areas, as well as the United States as a whole. Tabulations are published containing characteristics of persons arrested by age, sex and race.

Arrest statistics are collected annually from contributing law enforcement agencies and the figures used in the tables this year were submitted by agencies representing 69 percent of the United States population. In using these arrest figures it is important to remember that the same person may be arrested several times during one year for the same type or for different offenses. Each arrest is counted. Further, the arrest of one person may solve several crimes and, in other instances, two or more persons may be arrested during the solution of one crime.

Arrests are primarily a measure of police activity, as it relates to crime. Although police arrest practices vary, particularly with respect to juveniles, contributors to this Program are instructed to count one arrest each time an individual is taken into custody for committing a specific crime. A juvenile is counted as a person arrested when he commits an offense and the circumstances are such that if the offender were an adult, an arrest would be made.

Arrest data is primarily a measure of law enforcement activity, but it does provide useful information on the characteristics of persons arrested for criminal acts. It is a gauge of criminality when used within its limitations as must be done with all forms of criminal statistics, including court and penal.

Table 18.—*Arrests, Number and Rate, 1965, by Population Groups*

[Rate per 100,000; 1965 estimated population]

[1] In suburban agencies male arrests under 18 increased 6.6 percent and female arrests under 18 increased 15.5 percent. In rural agencies male arrests under 18 increased 1.0 percent and female arrests under 18 increased 6.4 percent.

Police Employee Data

This section contains tables relating to police personnel. Figures showing police strength by number of full-time police officers and civilian employees are based on national averages. These figures should not be interpreted as indicating recommended or desirable police strength. Adequate police requirements for a specific place can only be determined following careful study and analysis of the local situation together with a thorough evaluation of the numerous factors which affect local police needs.

Two tables containing police employee rates are set forth. In the first, total employees including civilian personnel are used, whereas in the second table only sworn personnel are used to compute rates.

The police employee rate ranges in Table 43, which include civilians, show the interquartile range between the upper limits of the lowest quartile and the lower limits of the highest quartile. In other words, 50 percent of the cities shown in each population group and geographic division have a police strength within the rate ranges shown. By arraying rates in this manner, extremes are eliminated.

In Table 44 where rates are published for police officers, complete rate ranges are provided as supplemental data for those who may be interested in using these figures to make limited comparisons.

Another table is presented this year showing police strength for all state police and state highway patrol organizations. This table is designed to show, by state, the number of miles of state and Federal highway per sworn employee, as well as the number of registered vehicles per officer. These rates are only a rough yardstick as to comparative workload and personnel strength because of widely differing functions and other factors. The wide variations in sworn and civilian personnel among the various states can be accounted for in part by the differences in responsibilities assigned to the departments. It is pointed out, for instance, that state police generally are responsible not only for traffic patrol, but also conduct a major portion of the criminal investigative work in the unincorporated areas of the states. On the other hand, the activity of the state highway patrol organizations for the most part are limited to traffic and highway patrol, which includes handling all types of crime which come to their attention during the performance of their patrol functions. Many of these state

highway patrol groups also are authorized to and do participate in criminal investigative work when requested to do so by local departments or sheriffs' offices.

The annual collection of police employee data provides figures for police killed and assaulted. Collection of these data is supplemented with respect to police killed in the line of duty by the use of a special questionnaire, through the use of which additional details on this important subject are accumulated. Data relative to police killed and assaulted are also presented in the Summary Section of this publication.

Table 43.—*Full-Time Police Department Employees,[1] December 31, 1965, Number and Rate per 1,000 Inhabitants, by Geographic Divisions and Population Groups*

[1965 estimated population]

Table 44.—*Full-Time Police Department Officers, December 31, 1965, Number and Rate per 1,000 Inhabitants, by Geographic Divisions and Population Groups*—Continued

(1965 estimated population)

Geographic division	TOTAL (3,613 cities; population 109,633,000)	Population group					
		Group I (55 cities over 250,000; population 41,822,000)	Group II (92 cities, 100,000 to 250,000; population 13,035,000)	Group III (217 cities, 50,000 to 100,000; population 14,891,000)	Group IV (433 cities, 25,000 to 50,000; population 15,061,000)	Group V (974 cities, 10,000 to 25,000; population 15,016,000)	Group VI (1,842 cities under 10,000; population 9,806,000)
West South Central: 258 cities; population 10,174,000:							
Number of police officers	12,093	5,900	1,836	1,319	1,171	1,111	756
Average number of officers per 1,000 inhabitants	1.2	1.3	1.2	1.1	1.0	1.0	1.2
Rate range	0.3–2.4	1.0–1.8	0.9–1.6	0.6–1.5	0.5–1.4	0.3–2.4	0.4–2.4
Mountain: 178 cities; population 4,502,000:							
Number of police officers	5,725	2,037	499	803	1,033	653	700
Average number of officers per 1,000 inhabitants	1.3	1.3	1.6	1.2	1.1	1.1	1.4
Rate range	0.2–3.2	1.0–1.5	1.3–2.3	0.9–1.7	0.5–1.6	0.4–2.2	0.2–3.2
Pacific: 407 cities; population 14,858,000:							
Number of police officers	21,513	10,115	2,066	3,145	2,463	2,330	1,394
Average number of officers per 1,000 inhabitants	1.4	1.7	1.3	1.2	1.3	1.4	1.6
Rate range	0.2–3.7	1.0–1.9	1.0–1.7	0.9–1.9	0.2–3.2	0.7–2.5	0.4–3.7

Suburban Police and County Sheriff Departments

Suburban: [2] **1,770 agencies; population 40,251,000:**		**Sheriffs: 1,154 agencies; population 33,357,000:**	
Number of police officers	48,446	Number of officers	27,299
Average number of officers per 1,000 inhabitants	1.2	Average number of officers per 1,000 inhabitants	0.8
Rate range	0.1–7.5	Rate range	0.1–9.7

[1] Only one city this size in geographic division.
[2] Agencies and population represented in suburban area are also included in other city groups.

Population figures rounded to the nearest thousand. All rates were calculated on the population before rounding.

Table 45.—*Civilian Police Department Employees, December 31, 1965, Percentage of Total by Population Group*

Population group	Percentage civilian employees
TOTAL, ALL CITIES	**10.7**
Group I (over 250,000)	11.3
(Over 1,000,000)	9.6
(500,000–1,000,000)	12.4
(250,000–500,000)	14.9
Group II (100,000–250,000)	12.8
Group III (50,000–100,000)	10.6
Group IV (25,000–50,000)	9.2
Group V (10,000–25,000)	7.8
Group VI (2,500–10,000)	10.2
Suburban agencies	12.0
Sheriffs	15.1

Table 46.—*Number of Police Officers Killed,[1] 1965, by Geographic Divisions and Population Groups*

Geographic division	TOTAL	Population group						
		Group I	Group II	Group III	Group IV	Group V	Group VI	County, State Police and Highway Patrol
		Over 250,000	100,000 to 250,000	50,000 to 100,000	25,000 to 50,000	10,000 to 25,000	Under 10,000	
TOTAL	**83**	**20**	**3**	**2**		**6**	**12**	**40**
New England	3					1	2	
Middle Atlantic	10	3	1	1		1	1	3
East North Central	10	5				1	1	3
